

CHROMA/STAIN REMOVERS

Chromaline stain removers are non-caustic, biodegradable gel cleaning products formulated for the removal of stubborn screen printing ink stains remaining after the stencil has been removed.

APPLICATION

Chromaline stain removers are effective on all types of ink, including plastisol, UV, vinyl, conventional, solvent-based inks and more. Our stain removers do not contain any mesh-damaging caustic ingredients, and therefore can be left on stubborn stains as long as desired without degrading the mesh. Chromaline stain removers contain detergent additives that will leave the screen clean and degreased.

CHARACTERISTICS

Chromaline stain removers have a gel consistency which allows the operator to treat an entire screen or only a specific portion of a screen. Our stain removers are low odor, low toxicity products. When used as directed, it is acceptable to rinse product into the sewer system. However, spills should be mopped up and disposed of in an appropriate container.

USAGE INSTRUCTIONS

After the stencil has been removed, Chromaline stain removers can be applied to any remaining ink stains or residue. Speed of solubilization of the stain varies with the type of ink. Products may be applied with spray application, shop cloth, or brush. The screen may be lightly scrubbed to aid in stain removal. Chromaline stain removers can be left on the screen for several minutes or overnight if desired, with no detrimental effect on the mesh. Pressure rinse screen and dry. Product may affect frame/screen adhesive, so it is advisable to minimize contact with that area of the screen.

CHROMA/STAIN REMOVER™ 560 RED

Regular use of these products will reduce or eliminate ink residue or haze in mesh. Contains degreasers to leave the screen degreased and ready for re-use.
