

CHROMA/PRESS WASHES

Chroma/Press Washes are biodegradable, fast drying liquid cleaning products formulated for the removal of screen printing inks from screens and equipment. These press washes are great replacements for hazardous low flash point products such as MEK and lacquer thinners. Chroma/Press Washes can be used on press when taking breaks, changing colors, or taping off areas of the screen. Products dry without leaving any film or residue that would prevent tape from sticking to the fabric. The press washes can also be used for a final clean when it is desired to save the stencil in the screen, since no rinsing is needed. With continued use, Chroma/Press Washes help to reduce mesh staining because they clean more completely and will not cure ink in the screen as lacquer thinners will.

SPECIFICATIONS

Chroma/Press Washes have flash points above 100°F, and therefore are not required to be classified as flammable. The press washes evaporate quickly, but do not contain any ozone depleting solvents or petroleum distillates. Chroma/Press Washes evaporate somewhat slower than lacquer thinner type products, and therefore will allow the printer to wipe more ink out of the screen before the product has evaporated. Less product is needed to clean a screen and less product is lost to evaporation, thereby effectively reducing VOC usage and emissions. Chroma/Press Washes are low toxicity products and do not contain any components which have exposure limits, or are currently on the OSHA Hazardous Substance List, or any other State Hazardous Substance List. Products comply with SCAQMD's Rule 1171.

INSTRUCTIONS FOR USE

Chroma/Press Washes can be applied from spray bottles, spray systems, or wiped on with a cloth. For the most effective cleaning of screens, card up all of the excess ink after printing. Apply the product to the screen and wipe the ink out of the mesh. Repeat until no ink remains. Products can also be used to clean equipment — just spray or wipe on with a shop cloth.

CHROMA/PRESS WASH™ 450

Chroma/Press Wash™ 450 is an all-purpose press wash, with special effectiveness on plastisol and graphic inks. Chroma/Press Wash 450 can be used on most inks, including plastisol, UV, lacquer-based, conventional, vinyl and others. Chroma/Press Wash 450 is evaporative and contains some citrus solvent.

CHROMA/PRESS WASH™ 470

Chroma/Press Wash™ 470 is a fast evaporating all-purpose press wash, with special effectiveness on UV and soldermask inks. Chroma/Press Wash 470 can be used on most inks, including plastisol, UV, lacquer-based, conventional, vinyl and others.

CHROMA/PRESS WASH™ 495

Chroma/Press Wash™ 495 is an all-purpose press wash. Chroma/Press Wash 495 can be used on most inks, including plastisol, UV, lacquer-based, conventional, vinyl and others.
