

MULTI-PURPOSE WASHES

CHROMA/CITRA-KLEAN™ 2000

Chroma/Citra-Klean™ 2000 is a citrus-based water-soluble, biodegradable liquid cleaning product formulated for the removal of screen printing inks.

APPLICATION

Chroma/Citra-Klean 2000 is an all-purpose ink cleaner with special effectiveness on plastisol and water-based inks. May also be effective on graphic inks and others. Chroma/Citra-Klean 2000 contains both ink degradant and degreasing agents which leave the screen clean and free of oily residues after rinsing. Prolonged use will increase mesh life due to reduced staining.

CHARACTERISTICS

Chroma/Citra-Klean 2000 has a flash point of 120°F, and a low evaporation rate. This aids in reducing VOC emissions, as well as makes the product suitable for use in conjunction with recirculating systems. Chroma/Citra-Klean 2000 has a pleasant citrus odor and low toxicity. It does not contain any components that have exposure limits, or are currently on the OSHA Hazardous Substance List, or any other State Hazardous Substance List. Complies with SCAQMD's Rule 1171. When used as directed, it is acceptable to rinse product into the sewer system, however, spills should be mopped up and disposed of in an appropriate container.

USAGE INSTRUCTIONS

For effective cleaning of screens, card up all of the excess ink after printing. Apply the product to both sides of the screen and scrub the stencil edges and print areas thoroughly. Allow enough time for the product to solubilize the ink. Pressure rinse both sides. If there are any ink stains remaining after taking the stencil out, apply the product a second time to the stain area and wait 3-5 minutes. Pressure rinse and dry. No degreasing is usually required, except when using capillary films.

CHROMA/MILLENNIA CLEAN™

Chroma/Millennia Clean™ is a fast drying liquid cleaning product formulated for the removal of screen printing inks from screens and equipment.

APPLICATION

Chroma/Millennia Clean is an all-purpose press wash, effective on all screenprinting and soldermask inks. A great replacement for hazardous low flash point products such as MEK and lacquer thinners, Chroma/Millennia Clean can be used on press when taking breaks, changing colors, or taping off areas of the screen. Product dries without leaving any film or residue that would prevent tape from sticking to the fabric. Chroma/Millennia Clean can also be used for final clean when it is desired to save the stencil in the screen, since no rinsing is needed. Chroma/Millennia Clean can be used on most inks including plastisol, UV, lacquer-based, conventional, vinyl and others. With continued use, Chroma/Millennia Clean helps to reduce mesh staining as it cleans more completely and will not cure ink in the screen as lacquer thinners will.

CHARACTERISTICS

Chroma/Millennia Clean has a flash point above 100°F, and therefore is not required to be classified as flammable. Product evaporates quickly. Less product is needed to clean a screen and less product is lost to evaporation, thereby effectively reducing VOC usage and emissions.

USAGE INSTRUCTIONS

Chroma/Millennia Clean can be applied from a spray bottle, spray system, or wiped on with a cloth. For effective cleaning of screens, card up all of the excess ink after printing. Apply the product to the screen and wipe ink out of mesh. Repeat until no ink remains. Product can also be used to clean equipment - just spray or wipe on with a shop cloth.

To ensure the safe and proper use of Chroma/Screen Chemical products, always refer to the product MSDS before use.
